

Avantage Protection Cages

Access for servicing

Protecting your equipment is important, and access is required for regular or breakdown servicing.

Avantage – Designed for tough protection and easy service access.

With many cages there is a single lockable access door, but no one remembers where the key is located, and the component that needs servicing can't be reached from the access door.

Easy and large access was a core design priority in the Avantage range of cages.

Most air conditioning condensers need access to the compressor and electrics on the right-hand side, access to the condenser fan on the front, and you may need to remove the top panel to access the wiring loom.

Avantage Cages make servicing easy

Step 01

Outdoor Condenser is well protected.

Step 02

All panels are securely fastened together with security fixing screws that are simply removed with the torx tool. Supplied with every cage and readily available to the tradesman – vandals don't carry more than bolt cutters!

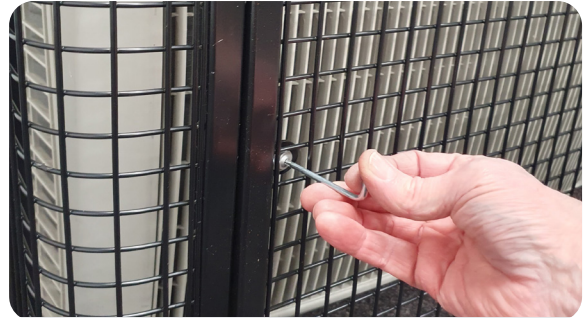

Step 03

Removing two fixings and the side panel provides easy to the control panel.

Step 04

Remove 6 more fixings on the front panel.

Step 05

This gives full front access to the fan.

Step 06

And another 4 fixings if you need to remove the top panel.
